How many employees does your organisation have?

2. Which product sectors do you deal with? (multiple choice possible) NB: Questions will often refer to your experience in the sector(s) you select; if you deal with more than one sector and your replies might significantly differ between sectors, please consider filling in the questionnaire separately for each sector. The expressions "sector you deal with" or "your sector" used in the questions (here and in following sections) should be understood as meaning: - "sector of activity" for businesses supplying products and for conformity assessment bodies, - "sector of responsibility" for national authorities, - "sector in which they purchase products" for citizens, consumers, end users, - "sector for which studies have been conducted or expertise gained" for academics or other legal experts.

Please specify

3. Where are you based?

Please specify

4. In which countries, other than the country of your primary establishment, are you active ?

6. Please choose from one
of the following options on
the use of your
contribution:

1. Are the products in your
sector(s) affected by non-
compliance with product
requirements laid down in
EU harmonisation
legislation?

2. What is the approximate
proportion of non-
compliant products for
your sector (product
volumes)?

3. Does the problem of non-
compliance negatively
affect consumers and
other end-users in your
sector?

4. Do businesses
complying with legal
obligations experience
negative effects on sales
and/or market shares due
to the presence of non-
compliant products?

My/our contribution can be

9. Do you have experience/knowledge of instances where a market surveillance authority lacks/lacked the technical means (notably testing facilities) to carry out specific tasks in your sector?

Please provide details

Yes

From our member NGO survey, none of the EU MS today have adequate financial resources allocated to independent in-use testing of vehicles on the road. Some will start following the VW scandal, but adequate market surveillance lacked so far.

I do not know

Yes

For example, a considerable number of vehicles are approved (sometimes separately for emissions systems) in Luxembourg. To our knowledge, there is no independent emissions lab in Luxembourg where the authorities would be able to verify compliance of such vehicles with EU emissions legislation independently.

7. Do you have experience/knowledge of instances where a market surveillance authority lacks/lacked sufficient financial resources to carry out specific tasks in your sector?

Kuna asutusel tuleb teostada järelvalvet paljudes erinevates valdkondades, siis on piiratud majanduslikud ressursid tinginud vajaduse seada prioriteedid nii valdkonniti kui ka valdkonna sees. Rahaliste vahendite täiendav vajadus puudutab eelkõige keemiliste ainete analüüsimetoodikate väljatöötamist ja rakendamist.

Yes

Kuna valdkond on lai ning ettevõtjate hulk suur alates suurte mahtudega ettevõtjatest väga väikeste ettevõtjateni (sh käsitöö), siis turust ülevaate saamine ning just väiksemate ettevõtjate toodeteni jõudmine on üsna inimressursimahukas.

Yes

Teatud juhtudel võib tekkida vajadus näiteks sellisteks keemilisteks ja füüsikalisteks katseteks, mille meetodid ei ole akrediteeritud ning nende katsete vähesuse tõttu puudub selleks ka vajadus. Samas on sellistel juhtudel võimalus pöörduda teiste riikide laborite poole.

Please provide details

Yes

in general PPE for professional use are rarely checked by authorities. Reason given is that professional users have knowledge about PPE and thus can judge on their own if product complies. In PPE, the limited resources are used with priority for consumer products. This means often no specific campaigns for professional PPE or only document checks, no testing. However in practice we see

Yes

same reasons as for question 7. Additional is that in several Member States the market surveillance authority is divided between professional and consumer use. In those cases, for the professional use the market surveillance is combined with labour inspection, which is known to lack inspectors in most countries.

there is a big variety of products in the PPE sector. In most cases the market surveillance authorities do not have own testing facilities and even lack the necessary technical knowledge on PPE. As a result, in many cases only documents and markings are checked, not the actual performance of the product.

Please provide details

Yes

HVACR equipment is difficult and expensive to test, no larger equipment has yet been tested, small AC only. Even within industry it is very time and resource consuming to come to a comparable test result for the same product on different test stands.

In addition, there are instances when products are made to order, which makes it difficult for MSAs to test and/or evaluate compliance

Yes

From conversations with MSAs it became evident that not many member states are able to make the financial investment necessary in order to test complex/difficult products. As said previously, the testing and checks focus on safety and health and not energy consumption or the f-gas logbook. Apart from the financial investments, many member states lack the necessary competencies for addressing non-compliance

Yes

There are no test facilities within MSAs for medium and large HVACR equipment.

Please provide details

Yes

We believe that the market is not swamped by non-compliant products. However, to the first question under B1.6, our answer is meant to address the situation of rogue traders that deliberately do not comply and thereby exploit market opportunities at the lowest cost.

Yes

Our members reported examples of lack of enforcement in the area of environmental legislation (WEEE, RoHS, REACH). As regards to the enforcement of product safety legislation, it is often limited to consumer products, while market surveillance of business to business products is often relatively poor.

Yes

Our members repeatedly report that market surveillance authorities have a disproportionate focus on administrative paperwork such as the provision of the EU declaration of conformity, instruction for use of the product, etc... and rarely request the technical construction file or test reports. They rarely ask to test an engineering product in their facilities.

Please provide details

Yes

We have presented evidence from an independent third party to authorities demonstrating that a product placed on the market was unsafe and that its performance did not match the claims made by the supplier - but little action appears to have been taken. Feedback direct from authorities to us has also confirmed that their shortage of resources has restricted their ability to take effective

Yes

Meetings with authorities have shown that there is a lack of knowledge and understanding of products in the electrical sector. As regards to the enforcement of product safety legislation, it is often limited to consumer products, while market surveillance of business to business products is often relatively poor.

Yes

Manufacturers have funded independent third party testing as there is no provision for this work to be carried out by authorities. For some sectors, for example motors, they have no laboratory facilities in the UK at all to test products against requirements of the Ecodesign Directive. In our experience we are unaware of any testing conducted in the UK on suspect products by authorities.

Please provide details

Yes

Some tests / surveillance activities do not include all tests on the product required by the harmonised standards so the conformity is checked on specific items / issues. The requirements are getting more complex and yet the market surveillance authorities do not get more staff, training or specific equipment.

Yes

Some authorities have realised that more staff is needed, and acted upon this issue, others have not.

Yes

Specific test benches are missing, so surveillance authorities have to ask professional test houses / notified bodies to perform the specific tests. For small spark ignited engines, the setting / clamping for emissions tests is of high importance, but as this is machine specific the equipment / knowledge is only available with the manufacturer.

When it comes to the financial resources of market surveillance authorities, in our opinion, market surveillance activities must be funded by the government budget. Evidently, we do not see it appropriate that market surveillance activities would be funded by the revenues collected from sanctions or administrative fees. Firstly, it would be remarkably difficult to plan the budget in practice and therefore also

One way to increase resources for market surveillance authorities it to allocate more funding from the EU, rather than from individual Member States for this purpose. Also, in case a product is found to be non-compliant and this is the final result, one suggestion could be for the importer/manufacturer to pay for the costs of the tests.

Market surveillance is a full responsibility of public authorities. It should thus be part of the general budget, and NOT be the purpose of a specific tax or administrative fees. Such administrative fees would be subject to criticism as being a "threat to (cost) competitiveness" for the local players. This criticism would be partially justified, also because it is difficult to have importers to contribute to such

12. Would you like to add any comments or suggestions on how to increase resources for market surveillance authorities?

Allocation of resources based upon fines or sanctions is morally wrong. The authorities would become "power strong" and flex their muscles in the wrong way. They need to remain 100% impartial. The market is meant to be "self policing" with companies highlighting non compliance of competitors; but no one is going to throw that first stone in the glass house; everyone is likely to have some minor

12. Would you like to add any comments or suggestions on how to increase resources for market surveillance authorities?

This should be organised by the European Commission instead of its member states. This should increase the objectiveness, now quite often member states try to protect their market favoring national companies. In addition, now always the same companies are surveilled because they have a big market share.

13. How could the resources for market surveillance activities be used more efficiently in your sector?: Market surveillance authorities should have more knowledge about the relevant sector (type and number of economic operators, market trends, etc.)

Markkinavalvonnalla on vaikutusta, mutta aina on yrityksiä, joiden strategia on tuoda mahdollisimman edullisia tuotteita. Erityisen edullisissa tuotteissa on usein säästetty myös turvallisuusominaisuuksissa. Vaikka yrityksen tuotteita on poistetaan markkinoilta, se ei riitä - seuraamukset tästä ovat yritykselle liian pieniä ja todennäköisyys jäädä kiinni on kohtalaisen pieni.

No

In RAPEX, the same categories of products and often the same non-compliances and risks can be observed over many years which means the influx of non-compliant products into the EU market does not stop. As there are not enough controls and fines are not high enough and sometimes the responsible economic operator cannot be found, there is insufficient

We believe that the primary function of Market Surveillance Authorities is not deterrence, but strengthening a compliance culture among economic operators through enforcement of the existing rules. At the moment, we see too much focus on formal non-compliance, rather than investigating instances of substantive technical non-compliance. There is also an issue with different levels of laws and sanctions in different countries. Sur-

Experience shows that some market players are honorable and responsible and will always respect the rules, while others are not and will not. Given that many MSAs do not have the financial or the human resources to actually surveil the market, the responsible players are the 'losers', while the non-compliant face a small risk of being caught and when they are caught the consequences are not sufficient.

CE still meand "China Export". EU is only economic area where you can export you electrical appliance without third party certification. This has lead to situation that EU is a "junk yard" of the world. Just but CE in you product and that's it. Ref. US and China, not so easy to enter those markets.

Due to poor detection of non-compliant products, fines that are currently in place are too rarely applied to discourage unethical operators from selling potentially dangerous products on the EU market. The absence of deterrence is such that figures show an increase in the number of non-compliant products entering the market (see answer to question 7). Fines and penalties need to be not only harmonised across

We recently saw action regarding Hoverboards which has substantially affected this category and removed many dangerous products from the market. We are ware that manufacturers of new hover boards are extremely careful to ensure compliance. This would be a great benefit to the toy industry as there are still companies that do not comply and know they will not be challenged.

The results / measures taken against importers or manufacturers of non-compliant products are not public. It is therefore hard to know how active or not the authorities are.

Even with non-compliant results in tests performed by market surveillance activities, consequences for manufacturers / importers / dealers are not very popular. Market surveillance

Deterrence is only be on aspect. MS is also an oportunity to spread knowledge.
In the "stick and carrot"-approach, there should be more emphasis on the "carrot"-part, ie. the benefit of having a CE-markt Product i a global marked. CE can be seen as a Quality stamp i other markets.

The quality and volume of enforcement activities in the EU varies widely. This creates uncertainty by economic operators and consumers. The publication of restrictive measures (eg RAPEX) does create reputation effects but unfortunately the quality of the data within RAPEX is poor. In many instances, RAPEX notifications are made which, were the matters to be taken to court,

The measures taken by authorities against importers/manufacturers for non-compliance are not made public, which makes it difficult to judge how active or inactive the authorities are. All Member States should regularly publish the results of their market surveillance activities/decisions. If findings of non-compliance were published, this would have a negative reputational impact on the manufacturers that did

The budget for market surveillance at EU level could rise at ca. 1 EUR/ inhabitant per year, i.e. a total of 450 to 500 MEUR / year. Non-compliance has a highly destructive effect on confidence across the whole value chain, and as such on the very functioning of the internal market for goods (cf. famous article by Nobel Prize winner Akerlof on the market for "lemons"). In addition, non-compliance destroys

Regarding the increase of power, we believe that there is sufficient power in place, but the authorities should develop mechanisms for preventing free riders from making money, which can be a source of finance. There should also be more publicity awarded to restrictive measures against non-compliance. However, it should not disgrace an entire sector of products. Although our reply indicated that we were not in favour of an increase in power, we do not think that the authorities should be given more powers.

We would only consider imposing higher fines to be fair where there have been repeated offences. Deterrence measures should be targeted at companies that deliberately flout the rules, which are typically those that do not have established and well-respected brands. In our experience, deterrence measures typically do not impact on the companies most responsible for non-compliance.

Currently the scales of fines and penalties are set amounts and not related to the value of the trade in non-compliant products. Often a single sale of a non-compliant machine in our sector can generate profits higher than the potential fine, hence the deterrent effect is negligible. Penalties should be based on the value of the trade, not on set figures.

- Toezichthouders moeten zich richten op een meer risico-gebaseerde aanpak om zo de pakkans bij niet naleving te vergroten. Dat is effectiever dan de competenties uitbreiden, boetes verhogen, of meer publiciteit aan niet-naleving van de regels te geven. Competenties uitbreiden zal weinig zin hebben, zeker in Nederland hebben toezichthouders al heel veel competenties.

Many (if not most) economic operators are doing their utmost to comply with product safety rules, and non-compliance is often the result of a lack of clear information on the application of product rules, misinterpretation of applicable legislation, or subcontracting production to third parties who have themselves not complied.

Imposing higher fines could in theory increase the
