In certain member states like Greece, authorities tend to take literally the general clause contained in almost all regulatory texts "products which do not conform with this legislation should not be placed in the market" and they mandate a product recall from the market place for any kind and severity of non-conformance! They do not apply sanctions which are analogue to the non-conformance, but they take

Sanctions should be imposed by the courts, rather than by surveillance authorities. Unless there is perfect harmonisation of the methods and quality of enforcement measures across the EU, individual Member States will adopt differing approaches and cause uncertainty in the market. In many instances when consumer safety matters have come to court in the UK, the surveillance authorities have been

17. What powers do you think market surveillance authorities need in order to carry out more effective and deterrent action in your sector?: Power to enforce fines on behalf of another EU Member State's authority upon request	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: Establish a set of minimum core elements to be taken into account by all market surveillance authorities in calculating fines	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: Establish a more detailed common methodology to be taken into account by all market surveillance authorities in calculating fines	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: None, this is not a priority	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: None, different methodologies are not an issue for market surveillance in the Single Market	19. Would you like to add any comments or suggestions on methodology to be applied by market surveillance authorities to sanction non-compliant businesses?

Leider sind Geldbußen gegen Wirtschaftsakteure in anderen Mitgliedstaaten nicht durchzusetzen. Damit fehlt ein wichtiges Element der Abschreckung. Gleiches gilt für Auskunftersuchen, die nicht oder nicht ausreichend beantwortet werden. Maßnahmen in anderen Mitgliedstaaten können dann nur eingeleitet werden, wenn die dort zuständige Behörde kooperiert.

As a competency of each member state, setting minimum, or even standardised methodologies will be difficult. However, it is also necessary for both the cooperation between member states, and the EU-wide enforcement action. If member states cannot agree on common working methods, it is unlikely they will be able to perform joint actions together. Similarly, if the methodology by which

Pragmatism should be the common thread to have dissuasive and effective sanctions. The risk analysis realized to define the risk level of a non compliance item should be harmonized between members for the most usual cases. This will allow to avoid different interpretation which can conduct to apply sanctions or not.

What comes to the minimum core elements or common methodology to be taken into account in calculating fines, it might be problematic in terms of legal protection of economic operations. Taking into account the constitutional principles and rule of law, in our view, the decisions concerning the calculation of the fines should be based eventually on the decision and judgment of the independent court. We do not

Q 17 is not well targeted. Very often it is not about missing legal rights of market surveillance authorities to take action at national level but about missing personal and financial resources as well as missing political will and support to fine companies at a level which would be an effective deterrent. What is urgently needed is a better EU harmonised system to better

There is a need to provide equal treatment in the internal market for all products, including the harmonisation of sanctions for non-compliance within the EU.

This could be addressed in the legislation itself. For example the Energy Labelling Framework directive leaves this to the Member States.

Rather than counting on

Member States should use common best practices and set of rules (guidelines) on proportionality (e.g. Sir Hampton report) in order to elevate and harmonise the overall resource, skills & process level across all EU Member States. In this context, fines should not be seen as a way of "punishing" economic operators. Instead, they are needed as a service by Market Surveillance Authorities to improve market

Beyond cooperation between national market surveillance authorities, industryAll Europe advocates for a unified market surveillance authority at EU level, in charge of protecting all citizens, all workers, and all businesses in the EU against non-compliant products, whatever their origin (internal or imported). This authority in charge of the internal market should cooperate with a substantially unified Customs

Fines and the application of fines should be left to the Member State to determine. All Member States have a system of fines and penalties. Successful deterrence comes from creating a culture where rogue businesses do not dare to act as national market surveillance activities are ever present in the market.

As previously expressed, sanctions and penalties should be proportionate and

In addition to nationally set fines, sanctions and penalties, the deterrent effect is above all else reached by creating a culture where rogue businesses do not dare to act, as national market surveillance has an active presence on the market.

A dissuasive national minimum and a proportionate maximum for deterrent sanctions can be established by way of providing guidance

Die Fragestellung in Frage 17 ist unserer Auffassung nach irreführend. Viele der hier aufgeführten Maßnahmen dürfen die Marktüberwachungsbehörden bereits heute ergreifen, teilweise ist dies sogar im EU-Recht verankert. Kritisch bewerten wir die Möglichkeit restriktive Maßnahmen zu ergreifen, ohne dass eine Nichtkonformität festgestellt wurde bzw. um zukünftigen Missständen zu begegnen.

It is important to agree on the need to sanction non-compliant companies. The level of sanctions need to reflect both the financial gain by the violation, the risks associated by the violation, the period of time it has been effective, the extent to which the violation is intentional and the prior history of compliance of the business operator. Decisions should be made case-by-case based on

17. What powers do you think market surveillance authorities need in order to carry out more effective and deterrent action in your sector?: Power to enforce fines on behalf of another EU Member State's authority upon request	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: Establish a set of minimum core elements to be taken into account by all market surveillance authorities in calculating fines	18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Dissuasive fines are important for cases of serious non-compliance. However, fines should also be proportionate, i.e. trivial cases of non-compliance should not be used as a revenue stream or have the focuss because of a lack of expertise and resources to investigate more technically complex issues.

What is urgently needed is a better EU harmonised system to better enforce legislation. complemented by clearer legal rules and guidance on how enforcement should take place. The Commission should propose a similar legal framework as is under development for the type approval and market surveillance of cars which foresees an active role for the EU in enforcement.

Disagree	Agree	Agree	Disagree	Disagree	Define and publish the list of fines versus non-compliance; set lower fines when the non-compliance can be fixed and the Company is willing to do it in short time. Use high fines where the non-compliance is obvious and the Company does not take necessary measures to fix it. Clearly inform all business stakeholders of their responsibility and consequences in case of placing non-compliant

Major manufacturers has often more resources for providing material to MSA and has dedicated functions to support in MSA requests. SME might have bigger issues for providing necessary material from their suppliers. We are for a more flexible approach from MSA depending on the audited manufacturers possibility to handle a MSA request. We have seen MSA requests from different MS that refuse

We need a better focus on making sanctions proportionate. Significant fines for significant and widespread risks and stop silly fines on trivial marking offences e.g the CE marking is slightly incorrect or the C and the E are spaced a little too far apart!

Enforcement authorities do not often possess the expertise and resources to investigate more technically

The Belgian 3 sealed sample picking system is a good way of surveillance. 1 sample is analysed and the other 2 samples stay sealed; When an non compliance is detected the company can contact an autorised partner to do a counter analysis by a diffrent party as the first one. If there is inconsistency a third authorised party can make a final analysis to determine who is right.

Strongly disagree

18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: None, different methodologies are not an issue for market surveillance in the Single Market

Strongly disagree

19. Would you like to add any comments or suggestions on methodology to be applied by market surveillance authorities to sanction non-compliant businesses?

17. What powers do you think market surveillance authorities need in order to carry out more effective and deterrent action in your sector?: Power to enforce fines on behalf of another EU Member State's authority upon request

Strongly agree

18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: Establish a set of minimum core elements to be taken into account by all market surveillance authorities in calculating fines

Strongly agree

18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: Establish a more detailed common methodology to be taken into account by all market surveillance authorities in calculating fines

Strongly agree

18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: None, this is not a priority

Strongly disagree

18. Divergences exist in the methodologies applied by market surveillance authorities in different Member States to sanction non-compliant businesses. Which measures do you think should be taken to address this issue?: None, different methodologies are not an issue for market surveillance in the Single Market

Strongly disagree

Our association raises the question whether the creation of a data base (as foreseen in the proposal setting a Framework for energy efficiency labelling) is appropriate. This would create new requirements for companies without effective control and could engender a serious risk concerning the protection of trade secret and IPR.

We consider the Blue Guide and the guides for the various directives an important instrument for the implementation of technical regulation. However, as opposed to past experience the procedures for elaborating these guides seem not transparent and less consensus-based. They even can contain inconsistencies among each other and with the relevant legislation.

2. In your experience or understanding would a broader use of electronic means to demonstrate compliance help to: Provide up-to-date information to consumers / end users	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of economic operators and notified bodies on a voluntary basis. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies could upload information regarding conformity of products.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies would be required to upload information regarding conformity of products	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the address of the electronic repository be beneficial?

What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies could upload information regarding conformity of products.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies would be required to upload information regarding conformity of products	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the address of the electronic repository be beneficial?

2. In your experience or understanding would a broader use of electronic means to demonstrate compliance help to: Provide up-to-date information to consumers / end users	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of economic operators and notified bodies on a voluntary basis. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. 3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. They would be responsible for developing and maintaining information available.

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies could upload information regarding conformity of products.

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies would be required to upload information regarding conformity of products

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the address of the electronic repository be beneficial?

2. In your experience or understanding would a broader use of electronic means to demonstrate compliance help to: Provide up-to-date information to consumers / end users	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of economic operators and notified bodies on a voluntary basis. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. They would be responsible for developing and maintaining information available.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies could upload information regarding conformity of products.	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies would be required to upload information regarding conformity of products	3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the address of the electronic repository be beneficial?

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory decentralised 'Digital Compliance' system: for instance the system could consist of information available on the websites of manufacturers, authorised representatives, notified bodies. They would be responsible for developing and maintaining information available.

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Voluntary centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies could upload information regarding conformity of products.

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Compulsory centralised 'Digital Compliance' system: for instance the system could have the form of an electronic repository of information; it would be developed, owned and maintained by the European Commission; manufacturers, authorised representatives, notified bodies would be required to upload information regarding conformity of products

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the address of the electronic repository be beneficial?

Strongly agree

Strongly agree

Disagree

1, a legislation of compliance should be focus on "batch production compliance"
 2, the batch production compliance records should be upload and registered in the big data base which operated and maintained by notified bodies. different notified body has their own database but should meet requirements of EU legislation and under control of authority.
 3, anybody scan the e-label on the product via ordinary

1. What is the approximate proportion of products placed on the market by manufacturers or EU importers located in another EU Member State in your sector (based on product volumes)?

41 to 50%

2. Based on your experience what is your view on manufacturers or EU importers being contacted by a market surveillance authority of another EU Member State?: I think it is useful in correcting the non-compliance for all products concerned in the Single Market

Agree

2. Based on your experience what is your view on manufacturers or EU importers being contacted by a market surveillance authority of another EU Member State?: I think it is useful that authorities are able to discuss non-compliance directly with the business having the greatest level of responsibility and knowledge

Agree

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would an e-labelling system containing the product identification and/or manufacturer contact details be beneficial?

Strongly agree

3. What is your view about the following options to better exploit the potential of electronic means for demonstrating compliance?: Would resorting to an automatic identification and data capture system(*) to facilitate access to the repository be beneficial?

Agree

4. Would you like to add comments or suggestions on how to facilitate businesses' demonstration on compliance?

A decentralised database would simply not be a viable option for compliance.

1. What is the approximate proportion of products placed on the market by manufacturers or EU importers located in another EU Member State in your sector (based on product volumes)?

Unable to estimate

2. Based on your experience what is your view on manufacturers or EU importers being contacted by a market surveillance authority of another EU Member State?: I think it is useful in correcting the non-compliance for all products concerned in the Single Market

Strongly agree

2. Arbejdstilsynet er bekymret for at et 'digitalt overholdelsessystem' vil være administrativt byrdefuldt for virksomhederne uden at der opnås den ønskede effekt. Vi kan bl.a. være bekymret for om vi som myndighed kan stole på at data i systemet er ajourførte, og om vi uden videre vil kunne bruge sådanne data som grundlag for vores afgørelser. I dag sender vi en e-mail til fabrikanten og udbeder os de

The Blue Guide mentions in its chapter 4.2.2 "Union harmonisation legislation is prescriptive as to the ends but not as to the means to achieve those ends. This means that Union harmonisation legislation foresees requirements for the traceability of products made available on the market, without stipulating how to achieve or implement these requirements". It is our understanding that a certain

We warmly welcome the Commission's plan to evaluate current compliance systems and modernize and simplify systems. In principle, in order to ease SMEs' opportunities to do business and reduce administrative burden digital compliance' systems should be simple and user friendly. Furthermore, in order to ensure easy usability, digital system should apply the once only principle. We believe that

In theory using electronic means could reduce administrative burdens and provide for faster communication.

At present it is doubtful how either a voluntary or compulsory digital compliance system would function.

EGMF believes that an e-label applied on the machine instead of a database could facilitate a better control of the data which will have fewer risks of being lost. A simplified e-labelling solution would allow manufacturers to print a machine readable coded pattern (e.g. a QR code) onto the product data label with the specification that the code would not be a link to a web site, but instead contain

Da die technischen Unterlagen ohnehin zu erstellen sind, würde ein obligatorisches System in erster Linie zu einer höheren administrativen Belastung der Unternehmen führen und gerade diejenigen Unternehmen bestrafen, die bereits aufwändige interne Software-Systeme hierfür aufgebaut haben. Ein freiwilliges System birgt hingegen das Potential, einen "Wissens-Pool" aufzubauen,

4. Would you like to add comments or suggestions on how to facilitate businesses' demonstration on compliance?

1. What is the approximate proportion of products placed on the market by manufacturers or EU importers located in another EU Member State in your sector (based on product volumes)?

2. Based on your experience what is your view on manufacturers or EU importers being contacted by a market surveillance authority of another EU Member State?: I think it is useful in correcting the non-compliance for all products concerned in the Single Market

2. Based on your experience what is your view on manufacturers or EU importers being contacted by a market surveillance authority of another EU Member State?: I think it is useful that authorities are able to discuss non-compliance directly with the business having the greatest level of responsibility and knowledge

No opinion

Strongly disagree

Some businesses now provide instruction manuals and Declarations on their websites, that clearly do not comply with current requirements, yet authorities do not monitor these, and do not contact organisations. If there was some attempt at market surveillance, then manufacturers would start to work towards compliance.

Strongly agree

Agree

A centralised system with e.g. EU Type examination certificates, 11A or 11B status, Declaration of Conformity and possibly further information would certainly help to show compliance, not only to market surveillance authorities but also to customers.
This system could be set by the sector with the support of the EU Commission or the other way around.

Digital solutions are beneficial. They reduce the administrative burdens for both business operators and the Member States. Furthermore, they are easy to update and make accessible to the users. If they are to be applied as part of market surveillance to document compliance, they need to be voluntary. Thus, DI do not support the establishment of a compulsory digital compliance system in line

The way that e-compliance would work in practice is not clear. We do not see that there is a connection between the sales of non-compliant machinery seen in our sector and the idea of e-compliance. The problem is one of lack of enforcement, not one of documentation.

The subject of Q3 is not a priority until there is more active market surveillance resource and support. Authorities should not burden manufacturers with too much extra administration requirements, as there is no guarantee of benefit to market surveillance with these approaches. Some manufacturers may seek to avoid extra administration, and enforcement of this may not be carried out thoroughly.

Strongly agree

Agree

The average consumer has absolutely zero understanding of a declaration of compliance. They don't even know they exist and even if placed in instruction manuals or packaging would not know what it was. 99% of the time including "paper" versions of these is an absolute waste of resources. They need to be available to MSA when checked for and that is all.

Keine Datensicherheit!
Sehr hoher Pflegeaufwand.
Als Hersteller halten wir CE ein und pflegen unsere Produktdaten. Ein elektronisches System der Aufsichtsbehörden stellt ein zusätzlichen Aufwand dar und diejenigen die heute keine CE haben kommen weiterhin ohne CE in die EU rein. Ein elektronisches System das von den Herstellern gepflegt wird ist nur ein zusätzlicher Aufwand

I would suggest creating a centralized database owned by European Commission / Market surveillance authority, where each Company must upload all the relevant info in support of the compliance of their product placed on the market. The database should be enough flexible to be able to update some info in case of product changes (HW and SW). Some info should be made available for general public and manufacturers,

Establishing a common system increases the administrative burden for industry and increased risk for confidential information being spread. It's also a step back to a product certification system that can require approval off submitted material before the product can be released to the market. The principal of manufacturers self declaration would suddenly be gone

Agree

Strongly disagree

Centralised measures described in the questions are potentially restrictive and costly for large business who already have invested in their own databases and compliance processes. For example some businesses have already invested in electronic systems that allow their retail customers to access certain compliance information like tet reports and declarations of conformity for example.

Dobrovoľný a decentralizovaný systém by umožnil rozhodovať podnikateľovi, či je takáto databáza prospešná jeho a vyhovuje jeho marketingovým zámerom.
Povinný systém by sa dal akceptovať, ak by ten, čo zaviedol povinnosť, platil za každý zverejnený záznam tomu, kto dal na zverejnenie podklady.

Nederlandse retailers gebruik vaak al elektronische middelen om aan te tonen dat hun producten aan de eisen voldoen, bijvoorbeeld door middel van QR codes of door verwijzingen op de websites. Ook de communicatie met toezichthouders kan zoveel mogelijk elektronisch verlopen om de administratieve last van controles zoveel mogelijk te beperken.

The efficiency of the system will in any case strongly rely on the scope and the verifications performed by the Authorities and the Commission.
A compulsory list of product models should be part of such a system.

Moreover, to ensure that the products tested are representative of those available on the market, samples should be collected

The European Commission should consider establishing a "whitelist" of businesses. This would comprise businesses which are able to prove they meet certain minimum standards relating to product compliance. For example, these businesses could provide proof to the Commission that they have adequate product compliance systems in place that complies with certain objective requirements, e.g.

3. In your experience what makes it difficult for a surveillance authority to take action against non-compliant products traded by businesses located in another EU Member State?: Businesses sanctioned do not pay penalties	3. In your experience what makes it difficult for a surveillance authority to take action against non-compliant products traded by businesses located in another EU Member State?: In particular in the case of goods traded online businesses contacted consider that they are not manufacturing, importing, distributing or making the product available on the market	4. National authorities in the EU Member States can currently exchange information on measures adopted to restrict the marketing of non-compliant products via several means (Rapid Alert System, notification procedures, common databases (ICSMS), expert groups, administrative cooperation groups). In your experience or knowledge in the relevant product category(-ies) how often do national authorities restrict the marketing of a product following the exchange of information about measures adopted by another authority in the EU against the same product?	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful to ensure that restrictive measures are adopted in other jurisdictions on the same basis as that way they can be effective in a larger part of the Single Market	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful because the authority using information can be more efficient and focus its inspection on the specific product requirements likely to have been infringed	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful because using the evidence gathered by the foreign authority on non-compliance allows time and cost savings

National authorities in the EU Member States can currently exchange information on measures adopted to restrict the marketing of non-compliant products via several means (Rapid Alert System, notification procedures, common databases (ICSMS), expert groups, administrative cooperation groups). In your experience or knowledge in the relevant product category(-ies) how often do national authorities restrict the marketing of a product following the exchange of information about measures adopted by another authority in the EU against the same product?	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful to ensure that restrictive measures are adopted in other jurisdictions on the same basis as that way they can be effective in a larger part of the Single Market	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful because the authority using information can be more efficient and focus its inspection on the specific product requirements likely to have been infringed	5. What is your view about the possibility that a national authority uses information on measures adopted to restrict the marketing of non-compliant products by another EU authority to adopt restrictive measures against the same products supplied within its own jurisdiction? : I find it useful because using the evidence gathered by the foreign authority on non-compliance allows time and cost savings
