FLOORTEC Underfloor heating

WARM WELCOME AT THE BIRCHES WITH MYSON UNDERFLOOR HEATING

A Myson FLOORTEC underfloor heating system complete with Myson Touch Screen Thermostats, has been installed on all three floors of The Birches, a stunning luxury new build property in Tranwell Woods, Morpeth, Northumberland, ensuring maximum comfort and uncompromised interior design possibilities. The magnificent property is characterised by an opulent entrance hall with marble staircases and stylish marble pillars throughout.

"From its design to the end result it was essential that every bit of this house was the best quality that it could be," explains Kevin Hutchinson. "With Myson I knew I was getting a fantastic product from a trusted manufacturer, as well as support in designing the best possible heating system."

Kevin adds, "I chose to install underfloor heating throughout the property because it offers a comfortable and even heat distribution. Underfloor heating also offered the added bonuses that wall space would be left free to accommodate any furniture or décor style and the floors would be comfortably warm on your feet - which is exactly what you would expect in a luxury property."

The property was also fitted with Myson Touch Screen Thermostats, which offer users the ability to programme their heating system twenty-four hours a day, seven days a week, with up to four time and temperature settings per day.

Product Manager for Underfloor Heating, Michelle Taylor explains, "Myson FLOORTEC is suitable for use with all types of wet central heating and can be used alongside a renewable heat source, or high

efficiency condensing boiler. This makes it an invaluable resource in larger properties as it is possible to create a system, which provides perfect comfort and outstanding performance credentials.

With the added benefit of full system planning, site visits, a standard ten year complete system guarantee, Myson's innovative underfloor heating systems offer end users peace of mind".
