KNOWLEDGE PARTNER
PROSPECTUS

Welcome from the CEO

The transition to a decarbonised and circular economy is one of the most urgent challenges facing industry today. Success depends on collaboration, alignment, and a consistent approach to definitions, data, and practices across sectors.

Our Knowledge Partnership programme empowers organisations that shape procurement across the built environment, and energy and transport infrastructure to lead change across their supply chains. By providing neutral expertise, curated guidance, and practical support, we help your suppliers meet sustainability expectations while driving measurable reductions in your Scope 3 emissions.

Together we can shape a more sustainable, resilient, and future-ready industry."

Yselkla Farmer
CEO

About BEAMA 2050 Connected

Become a BEAMA 2050 Connected Knowledge Partner, supporting an aligned and informed supply chain.

BEAMA 2050 Connected is an industry-led, not-for-profit platform supporting collaboration and education on Net Zero, circularity, and sustainable business practices across the built environment and energy and electric transport infrastructure value chains.

Our Knowledge Partner offering enables organisations to work with BEAMA to improve supply chain understanding, capability, and consistency around decarbonisation and circularity topics, supported by a trusted not-for-profit facilitator.

"Becoming a Knowledge Partner helps your supply chains to access sustainability knowledge, support with processes, and work together for consistent alignment, helping you to achieve your supply chain engagement and sustainability goals."

Amy Collins,
Head of Net Zero and Clean Tech

What is a Knowledge Partner?

A Knowledge Partner is an organisation that actively engages its supply chain on sustainability and decarbonisation through a dedicated, branded knowledge space within the BEAMA 2050 Connected Hub.

This space brings together the organisation's own resources into one space alongside BEAMA content and signposting to relevant external guidance where appropriate.This enables you to share sustainability information related to:

- Procurement policy or regulatory requirements.
- Guidance, briefings, and technical inforrmation.
- Training materials and recorded sessions.
- Priority topics you want your supply chain to engage with.

Stakeholders are invited to join BEAMA 2050 Connected to access these resources, supporting shared learning and alignment across the supply chain. **It is already accessed by over 150 manufacturers across the built environment and energy infrastructure supply chains.**

"As we transition our business to a Net Zero future, we know that we must partner with like-minded stakeholders in our value chain. BEAMA 2050 Connected is proving to be invaluable to us. We have used it to understand the basics such as embodied carbon and reporting and are also using it to support our internal training and development in Net Zero topics."

Why become a Knowledge Partner?

Strengthen supply chain capability and readiness

Equip your supply chain with credible sustainability guidance and information, helping to improve response quality, confidence and alignment with your requirements.

Reduce risk and duplication

Set clear, common expectations across suppliers, reducing repeated requests, inconsistent data and inefficiencies within procurement and tender processes.

Benefit from neutral industry coordination

Work with BEAMA as an independent facilitator, providing trusted structure, education and alignment on complex and evolving sustainability topics.

Demonstrate leadership and market credibility

Position your organisation as a leader in collaborative, industry-wide progress on decarbonisation, circularity and long-term supply chain resilience.

Extend your influence beyond direct suppliers

Engage with a wider cross-sector network through BEAMA 2050 Connected, shaping shared learning while benefiting from collective progress.

Who is in scope?

Our Knowledge Partnership is designed for electricity network and electric transport infrastructure providers, housing organisations and specifiers (new build and refurbishment), and major distributors that play a defining role in shaping procurement and sustainability requirements across their supply chains.

It is ideal for organisations seeking to drive greater collaboration, capability and data comparability among suppliers, while clearly setting expectations within tender and procurement processes.

By engaging as a Knowledge Partner, you can strengthen supply chain alignment, improve transparency, and support measurable reductions in Scope 3 emissions - helping to meet wider net zero and ESG commitments while building internal capability and resource for effective supply chain engagement.

Interested in benefiting from BEAMA 2050 Connected but not within scope of becoming a Knowledge Partner? Check out our BEAMA 2050 Connected subscriber route.

"Being a part of BEAMA 2050 Connected allows us to collaborate, share ideas and unite as one voice to drive real change in the industry."

Who we work with...

... you work with.

eama 2050 Connected

Delivering change at market and supply chain scale requires strong and strategic external partnerships. We actively engage with government departments, regulators and standards bodies and contribute to key cross-sector groups and All Member Parliamentary Groups (APPGs). This includes close ties with DESNZ and a leading role in the Waste Electrical and Electronic Equipment (WEEE) focused Joint Trade Association (JTA) and the REACH Cross-Sector Working Group.

We also engage at a European level. We represent industry perspectives on decarbonisation and the circular economy through leading trade bodies including T&D Europe, CECAPI and Orgalim.

What you recieve

For only **£2,500** per year, your organisation gains strategic influence and insight:

A dedicated Knowledge Partner Hub

Your branded space within the BEAMA 2050 Connected Hub hosts resources, guidance, and information for your supply chain, clearly communicating the sustainability priorities and expectations that matter to your procurement decisions.

Supply chain engagement opportunities

Receive up to four annual expert-led sessions (webinars or workshops) from the BEAMA 2050 Connected team. We'll deliver industry-priority insights and practical capability directly to your suppliers or leveraged flexibly at your own company events.

Strategic input into the BEAMA 2050 Connected Workplan

Shape discussion themes and focus areas, ensuring wider industry dialogue addresses the sustainability issues most relevant to you and your supply chain.

Recognition and visibility

Receive acknowledgment across relevant consultations, communications and events, positioning your organisation as a credible, collaborative leader in sustainability and decarbonisation.

Optional involvement in working groups

Contribute to cross-sector discussions and outputs where aligned to your priorities, strengthening both influence and shared learning.

BEAMA's Role

The Trade Association for Energy Infrastructure and Systems

BEAMA 2050 Connected leverages BEAMA's expertise in policy, standards, technical capability, and industry best practice to provide independent facilitation and coordination across the sector. We bring organisations together, share knowledge, and guide the development of information and guidance, ensuring consistency, comparability, and alignment across your supply chain.

Through this oversight, BEAMA helps industry focus on key sustainability priorities, supporting long-term progress towards Net Zero and a circular economy. By shaping consensus and enabling collaboration, we enable your organisation to make meaningful, coordinated contributions that drive measurable impact across your supply chain.

Interested in becoming a Knowledge Partner?

If your organisation is looking to strengthen sustainability engagement and alignment across its supply chain, we'd love to talk.

Contact the BEAMA 2050 Connected team to discuss becoming a Knowledge Partner.
